Collaboration Software

- EZMeetup
- VCLink
- EZ Draw
- PTZApp
- EZLive

Collaboration Software

- **EZMeetup** - Mobility software/app is a practical, collaborative program designed especially for AVer's multipoint video conferencing systems. It allows users to extend video conferencing from traditional conference rooms to desktops, laptops, tablets and smartphones. As SIP servers, AVer multipoints can allow 3 to 9 EZMeetup users to register and communicate with each other. Users will enjoy clear images and sound, ensuring that those important people can enjoy high-quality video conferencing wherever they are.
- **VCLink** - With this fantastic mobile application, AVer VC users can wirelessly present live images or snapshots taken with an iPad 2, iPhone or Android mobile device, allowing far site users to quickly see reports and physical objects close up. On top of that, meeting attendees can use VCLink to control their AVer video conferencing system directly on an iPad, iPhone or Android mobile device, instantly transforming it into a second remote control.

CONTD...

- **EZ Draw** – AVer's EZDraw app is a cutting-edge tool for collaborative communication on AVer's EVC300 and EVC900 video conferencing systems. Available for either Android tablets or iPads, EZDraw lets EVC300 and EVC900 users draw, write and highlight on either a shared desktop or shared virtual interactive whiteboard, making it even easier to share ideas, discuss proposals and build consensus with colleagues too far away for face to face meetings. Edited images can be easily saved in the popular PNG format, allowing you to keep an easily-accessible record of the discussion process.
- **PTZApp** - Is an innovative industry-first software program that makes the conference camera more powerful than ever. Compatible with PC and Mac computers, the PTZApp assists with firmware upgrades as well as providing a host of functions such as answering/hanging up via remote control, controlling the conference camera via the PTZapp, adjusting the camera's image quality, diagnosing operating status, and viewing live video from the camera. Most important of all, it's free
- **EZLive** - AVer's new EZLive is a powerful application that lets users easily record video, livestream, and capture images during real-time video conferencing. EZLive is a free application that is available on all AVer USB cameras and makes them an even more effective collaboration tool.
