Consent Documentation &
Enhance Patient Care

“

INTRODUCTION

Patient consent recording is a vital component of modern healthcare, ensuring clear communication, legal compliance, and effective medical education.

Informed consent is a crucial aspect of healthcare, ensuring patients are fully aware of their treatment options. Our Patient Consent Recording solutions provide a secure, efficient, and compliant way to document consent, benefiting hospitals, doctors, trainee surgeons, and medical education.

Seamless Patient Consent Management with A&T's Solution - **Consent Hub**

- Seamless Integration with HIMS
- Efficient Data Entry
- Instant access to Electronic Medical Records
- Audio & Video Recording
- Enhanced Communication

Pre-Integrated With **High-Quality Consent Recording Systems Ensuring Clear, High-Definition Video Recordings.**

Versatile Applications of Patient Consent Recordings

Individual Records :

Patient consent recordings can be stored as individual records, ensuring a robust and easily accessible database of patient-specific consent for future reference. This helps hospitals maintain accurate documentation for each patient.

HMS Integration :

The recordings can be seamlessly integrated into the Hospital Management System (HMS), allowing for unified patient data management. This integration ensures that all patient-related information, including consent recordings, is accessible in one central system for improved efficiency.

Educational Annotations :

Recorded content can be used for practical annotations and medical education purposes. Doctors, medical students, and healthcare professionals can use these recordings for training, enhancing understanding, and improving skills in medical procedures and patient interactions.

Why Hospitals Should Adopt This Solution

For Doctors

- Enhanced Patient Trust - Provide clear, transparent communication during the consent process.
- Ensure documentation meets regulatory standards, reducing liability.

For Trainee Surgeons & Medical Education

- Use real-world consent scenarios for in-depth training and interactive learning.
- Annotate recordings to highlight critical aspects for surgical training.

For Hospital Management

- Integrate recordings with existing HMS for comprehensive patient management.
- Choose a setup that suits your budget without compromising quality.
- Future-Ready System - Enhance operational efficiency and patient care.
